1. The preliminary amendment filed 6/5/01 has been entered as paper number 4. By this amendment claims 1-21,23-35 have been canceled and claims 36-44 have been added.
2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 22, 36-44 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,3,4,6,14,15,16 of U.S. Patent No. 6,336,587. Although the conflicting claims are not identical, they are not patentably distinct from each other because all of the current limitations can be found expressly within the patent

Art Unit: 2876

claims. That is, regarding current claims 22,36-40, the patent claims the objective lens located within an optical path of the code reader for focussing an image, a rotatable carrier (pat cl 6) for carrying a plurality of optical elements including a first and second different monochrome filters (pat cl 3), a laser pattern projector (pat cl 4), and the rotatable carrier wheel separated into a plurality of sectors (pat cl 6). Regarding current claims 41-43, all the limitations can be found expressly within patent claims 14-16. Regarding current claim 44, the '587 patent does not specifically claim the varying thickness optical element as now claimed. However, lenses of different thickness having different focal lengths are well known. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to use varying thickness lenses to change the focal length of the current invention in order to take advantage of the readily available and easily replaceable common lenses.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 22, 36,40,41,42 are rejected under 35 U.S.C. 102(b) as being anticipated by

Inokuchi et al 5,064,258. Inokuchi discloses as seen in figures 1 and 2 an optical system in which a laser source directs light out toward a target object. The light is then reflected and redirected into a image sensor (14). There is placed, in this optical path, an objective lens and a

Art Unit: 2876

circular disk (9) rotatable about a central axis with separate optical sectors (10) which can be used to elongate the reading (focal) depth of the system (col 4 lines 19+).

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claim 39 rejected under 35 U.S.C. 103(a) as being unpatentable over Inokuchi et al 5,064,258. Inokuchi discloses that which is seen above. Inokuchi does not disclose that the apparatus is hand held. Hand held code scanners/ object scanners are old and well known. It would have been obvious to a person of ordinary skill in the art at the time the invention was made to make the apparatus of Inokuchi hand held to increase its portability and therefore increase the versatility of the system.
